STRONGLINE

PLAN X

Because easy is simply better –
The new **planning system**

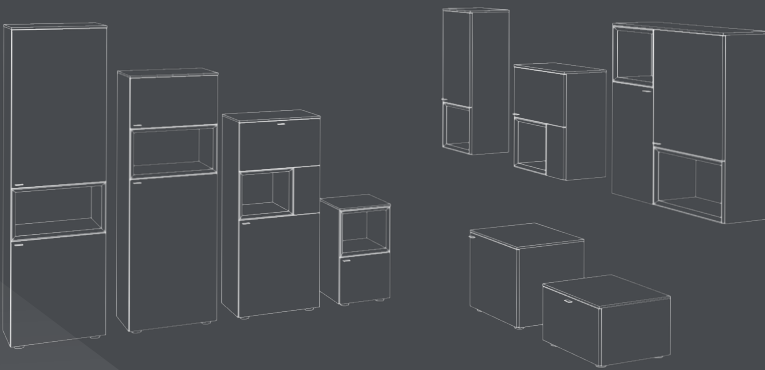

PLAN X is based on uniform grid sizes:

8 height grids

6 width grids

4 depth grids

are available for planning. Therefore, Plan X enables a furniture set-up that fits perfectly, matches your life-style exactly and gives the room a unique character.

X5 - WHAT YOU NEED TO KNOW FOR YOUR PLANNING PROJECTS:

- For planning elements the following rules apply:
A careful measurement is a prerequisite for exact assembly and alignment of the furniture. Please keep in mind that floors, walls, ceilings etc. are not exactly straight.
- Only planning elements of the same height can be combined, the elements are not stackable.
- The planning elements can be fitted together up to a total width of 240 cm, in this case the lacquered top panel will be in one piece end-to-end, the outer side panels of the planning elements automatically become middle panels. Standing items in the grids 1 to 4 can be planned with a wood top panel with a naturally curved edge, in 20 cm steps from 40 up to 300 cm.
- The planning elements are available as free-standing single items at the same price.
- If you want to change system recommendations, they have to be dismantled into their planning elements.
- The respective ambient lighting as well as underframes and underframe lighting for individual configurations can be found on the last page.
- Please always add an sketch to your order!
- Special designs (changes of width, height or depth) on request and at a surcharge!
changes of width for wall shelves and shelves for shelving units:
changes of height for wall panels and side panels:
- The range can be individually arranged with the planning programme **furnplan**

All models are protected by design law.
The right of technically required modifications as well as colour deviations is reserved.
No liability for misprints and errors.
All dimensions are approximate (all in cm).

Important notice:

The supplied fastening material (dowels and screws) is intended only for assembly of components to concrete or solid masonry walls. When assembling components to a wall please always adhere to the max. load values. The nature of the designated wall is ideally enquired during the order process and checked again before assembly by the assembly technicians. If the structure of the wall is deviating from solid structure (e.g. lightweight walls) a different, suitable attachment method is imperative. Clarify all electrical conditions for connection and device technology upfront. Freely hanging lightings need a solution with a duct channel on or below plaster.
