VISPRING

Luxury Beds - London 1901

The **Vispring Traditional Bedstead mattress** combines the most luxurious layers of Platinum Certified British wool that is ideal for a hygienic, cool refreshing sleeping surface with a hand nested pocket spring system that offers you comfort and support, helping you wake refreshed in the morning.

Mattress Tension: **Soft, Medium, Firm** or **Extra Firm**.

- 1254 Hand Nested Pocket Springs – Each spring is enclosed in a natural cotton calico pocket to ensure excellent breathability inside the mattress and offers a more precise and body-responsive support.
- Hand Teased Fillings – The traditional craft of gently separating fibres by hand enhances the inherent attributes of natural fillings. This meticulous process ensures an even distribution of fillings, giving an opulent feel. This process gives resilience and loft to the fillings to allow the air to move freely and the bed to breathe.
- Cotton Layer – A soft and durable cotton layer with responsive properties that complements the spring unit is added to the mattress to help provide a comfortable feel and enhances breathability.
- 100% Platinum Certified British Fleece Wool – The Wool used in this mattress has been awarded the Platinum Certificate and is guaranteed by the British Wool Marketing Board for its high quality and exacting standards. It is sustainable and renewable and has been cleaned without the use of bleach or chemicals and is lovingly made in England. Wool is a natural insulator providing coolness in the summer and warmth in the winter. Offering superb comfort, it also has hydroscopic properties encouraging the evaporation of body moisture.
- 2 Rows of Genuine Hand Side Stitching – Traditional hand-side stitching which secures the outer springs to the border at the top and bottom preventing roll-out and is the most highly skilled and labour intensive of all the operations.
- Hand-Tufted with Felt Washers – The traditional method of mattress upholstery where the fillings are secured by hand with tufts from the top of the mattress to the bottom to ensure all loose fillings are secured to provide the perfect finish.
- M-Pure Treated Finest Quality Cover – A pure and natural fire retardant is used on the cover, which is 100% sustainable, biodegradable and environmentally friendly. Instead of using the traditional chemical-based retardant, M-Pure uses natural Bio based ingredients instead, giving you a fresh and hygienic sleeping surface.
- Flag-stitched Handles – Handles on all sides for ease of positioning.
- Air Vents – Chrome vents to allow good air circulation, regulate temperature and keep the mattress fresh.
- Seasonal Turn – This Vispring mattress should be turned 'Seasonally' once every 3-4 months. With fillings on both sides, this mattress offers two possible sleeping surfaces together with an enhanced level of comfort. Turning will enable the fillings to settle more evenly and improve the ventilation of your mattress ensuring the life of your mattress will be prolonged.
